INTRODUCTION

The primary challenge in campus communication is not a lack of information, but the fragmented use of different platforms by individual student organizations. Because each group posts exclusively on its own preferred channel, students are left unsure of where to find specific updates. This disconnect causes students to miss critical events and opportunities, while organizers find it difficult to market their initiatives to a wider audience.

NotifiED

Notification meets Education

PROJECT BACKGROUND

NotifiED: An AI-Assisted Campus Engagement Framework is a mobile app designed to centralize Asia Pacific College's (APC) fragmented communication ecosystem into a single digital hub. It provides students with a unified platform to view official announcements, explore events, and manage schedules. Serving as an initial testing ground for scalability, usability, and accessibility, the system aims to close communication gaps before deploying to other educational institutions.

Target Clients:

- School Administrators
- Students
- Student organizations / event organizers

Main Users:

- Students
- Campus organizations

Platform

Mobile application for real-time updates and accessibility

(79% of Filipino student have smartphones (Social Weather Stations, 2021)).

COMMENT MATRIX

Panel Name	Project Section	Comment	Action Taken
Jose Eugenio L. Quesada	Proposed Solution	Integrate an AI assistant like Jarvis or Siri for enhanced functionality.	Proposed Solution updated Conducted research on suitable AI models for integration.
Felino Calderon	Introduction	Scattered information is not the problem	Introduction updated
	Scope and limitation	Update the Scope and Limitations. Indicate in the Scope that the project focuses on a mobile application. In the Limitations, mention that the admin side is not included.	Scope and limitation updated
	Statement of the Problem	Rephrase the wording for Scattered Information, Scattered Information is not a problem, Scattered Platform is.	Statement of the Problem updated

STATEMENT OF THE PROBLEM

Effective communication is essential in educational institutions to keep students informed and engaged. However, many schools lack a unified platform, causing student organizations and departments to use different channels such as social media, emails, and messaging apps for announcements and updates. As a result, students often struggle to identify where to access official information.

This study proposes a centralized mobile application that consolidates announcements and event information into one accessible platform for students.

PROBLEM 1:

Lack of Centralized Platform

There is no unified system for school announcements, events, and updates, causing information to be spread across multiple platforms. This makes it harder for students to access official information, leading to missed announcements and reduced engagement in campus activities.

PROBLEM

2- Difficulty in Accessing Event Information

Students often struggle to access complete and organized event details because information is scattered across different platforms. This results in inconvenience, delays, and lower participation in campus events.

PROBLEM 3:

Poor User Experience in Existing Information Channels

Students often struggle to find important campus announcements because information is scattered across social media, emails, and messaging apps. Since these platforms are not designed for academic use, updates become unorganized, leading to frustration, inefficiency, and reduced student engagement.

SURVEY RESULT

I struggle to keep track of school announcements because they are spread across different platforms (e.g., Facebook, Messenger, email, group chats).

SURVEY RESULT

I often find myself unsure which platform or account to check for official announcements from a specific organization or department

SURVEY RESULT

I sometimes miss important school events or announcements simply because I did not see them in time.

SURVEY RESULT

I feel overwhelmed by the number of different apps or platforms I need to check just to stay updated on school-related information.

SURVEY RESULT

Too many notifications from different school-related platforms reduce my motivation to check for announcements.

SURVEY RESULT

SURVEY RESULT

SURVEY RESULT

The platforms I currently use for school announcements (e.g., social media, email) make it hard to find academic or institutional information quickly.

SURVEY RESULT

I would use a dedicated mobile app that consolidates all campus announcements, events, and organization updates into one platform.

SURVEY RESULT

An AI chatbot that summarizes announcements and answers questions about school events would be useful in a campus app.

OBJECTIVES

The primary objective of this study is to develop a centralized mobile application that improves communication in educational institutions by consolidating announcements, events, and school-related information into a single accessible platform for students, addressing the challenges caused by decentralized and inconsistent information access.

OBJECTIVE 1:

Centralized Platform for Information

To develop a mobile application that serves as a centralized platform for school announcements, events, and updates, improving accessibility and reducing reliance on multiple communication channels.

OBJECTIVE 2:

Reduce Scattered Information

To improve the accessibility and clarity of event information by providing complete, organized, and easy-to-understand details within the application, reducing confusion from scattered sources.

OBJECTIVE 3:

Improve Communication Consistency

To enhance user experience by developing a user-friendly interface that allows students to easily navigate the application, access relevant campus updates, and stay informed with minimal effort.

VIDEO TEASER

PROPOSED SOLUTIONS

FEATURES

1. Student Profile Set-up

Students are required to complete a profile setup by providing essential information such as full name, student ID number, course, year level, and contact details.

1. Announcement System

NotifiED is the official campus platform that replaces scattered posters and social media feeds with a structured, personalized hub for announcements and updates.

1. QR Code Event Registration

The app enables event registration with QR codes. Students scan at venues, posters, or announcements, and attendance is instantly logged through their profile.

1. Organization Directory

The app provides a centralized directory of all recognized student organizations and campus bodies, each with a profile page featuring its name, description, officers, and contact details.

FEATURES

1. Manual Class Scheduling Interface

The app lets students build a personal academic skeleton by manually adding fixed commitments, lectures, labs, and seminars, creating a clear weekly overview.

1. AI-Powered Productivity Support

This feature bridges official announcements with personal study goals by using AI to analyze the free time ('white space') in a student's manually entered class schedule.

1. AI-Assisted Information Retrieval

This system changes how students engage with campus data. Through a conversational AI interface, students can ask specific questions about any announcement posted on NotifiEd.

If the problem is...	NotifiED fixes it by...
Cluttered social media feeds	Personal Announcement System: Putting all official campus announcements in one place using a clean, simple layout.
Long Memos	AI-Assisted Information Retrieval: Summarizing lengthy announcements into quick, actionable bullet points instantly.
Organization Detail	Organization Directory: Contact details and officer lists in one place.
Schedule	Flexible Calendar: Easily update your own weekly schedule.

LEAN CANVAS

Solution • Centralized mobile platform for announcements, events, and updates • A unified system that helps reduce confusion caused by scattered communication channels • AI assistant to help students stay informed and organized	Customer segments • Students • Campus organizers and Administrators	Unique Value Proposition • Artificial Intelligence (AI) assisted Mobile App	Key Metrics • Students are consistently updated on campus activities • Reduction in "missed announcement" reports	Problem • Platform ambiguity • No unified access point • Event location difficulty Existing Alternatives • TV/monitors • Email platforms • Bulletin boards • Social media pages
	Channels • Centralized mobile application • Push notifications for new announcements • AI chatbot		Unfair Advantage • Community-focused • AI-integrated • Scalable architecture	
Cost Structure • Marketing & Campus Launch: Costs for campus ambassador programs, promotional events, and university partnership onboarding. • App Maintenance & Compliance: Ongoing bug fixes, security audits, and data privacy compliance (GDPR/FERPA/local student privacy laws).			Revenue Streams • Sponsored Event Promotions: Paid "boosts" or featured slots from campus groups or local vendors looking to increase event visibility on the student feed. • Initial Implementation & Maintenance Bundle: A one-time, first-year fee covering setup, campus system integration, and full maintenance, transitioning to a standard annual SaaS subscription starting in year two. • Ticketing & Transaction Fees: A small percentage fee charged per ticket sold for paid campus workshops, concerts, or student fairs.	

USE CASE DIAGRAM

USER STORIES / ACCEPTANCE CRITERIA

User Story	Accepted Criteria
As a student, I want to view announcements in a chronological feed, so that I am always up to date with the latest official school news.	• Announcements are displayed in descending order, with the most recent entries shown first. • Each announcement includes a title, date, and a brief content preview. • A “Read More” option is available to display the full announcement details.
As a student, I want to ask the AI chatbot questions in natural language, so that I can get immediate assistance with campus-related inquiries	• The chatbot interface is accessible from the main application interface. • The system processes user input and generates contextually relevant responses. • The chatbot supports session continuity through chat history or provides an option to start a new session. • The system displays an error message if the user attempts to send a message without an active internet connection

User Story	Accepted Criteria
As a student, I want to manage my class schedule by manually inputting my subjects, so that I have a digital copy of my daily timetable within the app	• Users can add, edit, and delete schedule entries with specific days and time slots.
	• The system stores schedule data and identifies potential conflicts with campus events.
	• The schedule is presented in a clear and structured daily or weekly format.
	• The system prevents the user from saving an entry if mandatory fields like "Subject Name" or "Time Slot" are left blank.
	• The system provides an "Undo" or "Confirm Delete" prompt before permanently removing a scheduled item to prevent accidental data loss.

User Story	Accepted Criteria
As a student, I want to browse the organization directory, so that I can discover different campus groups and find their contact information.	• A complete list of recognized campus organizations is displayed.
	• Selecting an organization reveals its details, including officers and contact information.
	• Events associated with each organization are accessible within the organization profile.

SCOPE AND LIMITATION

SCOPE:

- A Mobile Application Development project designed to centralize decentralized campus communication into a single, real-time platform.
- It is designed for schools without an existing unified communication system.
- The application includes features such as announcements, event management and organization directories
- The system is intended for students, faculty members, school administrators, and student organizations.

LIMITATION:

- The system is limited to educational institutions only and not for commercial use.
- It requires a stable internet connection to function properly.
- The system does not replace existing communication tools like email but serves as a supplementary platform
