- **Discussion:** The team also showed the draft of the Use Case Diagram to the professor.
- **Decision:** Decided to consult with the project adviser to finalize the diagram.

Next Steps

- The group will consult project adviser about Use Case Diagram.
- The team will revise the user stories based on the approved Use Cased Diagram.

Screenshots

A screenshot of a Microsoft Teams meeting interface. The main window displays a System Context Diagram titled "System Context Diagram - NOTIFIED (Personal Campus Information Hub) v2". The diagram illustrates the interactions between a Student, the NOTIFIED Mobile Application, and various institutional services.

System Context Diagram - NOTIFIED (Personal Campus Information Hub) v2

Student
A university student who wants to discover campus events, explore organizations, view institutional email/calendar, and receive personalized notifications </size>

NOTIFIED Mobile Application
React native app providing event discovery, organization directory, institutional email and calendar viewing, AI-assisted interaction, and notifications. (Team 2 - our system) </size>

Institutional Identity Platform
Authenticates students using their institutional account and determines what services NOTIFIED is authorized to access on the student's behalf. </size>

Backend Event Management Service**
Reviews event submissions from organizers, manages the approval workflow, and exposes approved events and organization data through standardized APIs. (Developed by Team 1) </size>

Organization Social Media Platforms (Facebook/Instagram)**
Right click the image and select 'Copy image address' to use the link, Or use the links provided below. retrieve data from these platforms. </size>

Institutional Email Service
Provides the student's authorized institutional email information. (e.g. Microsoft Outlook/Graph for APC) </size>

Institutional Calendar Service
Provides the student's authorized schedule/calendar information. (e.g. Microsoft Graph for APC) </size>

Campus Organizations & Departments**
Information providers who create and submit events through the backend's event-management workflow. Not direct users of NOTIFIED. </size>
